Disclaimer

Maximize My Social Security is a tool developed exclusively by Economic Security Planning, Inc., a private company. This report is generated by Economic Security Planning, Inc. It is not a report provided by the Social Security Administration.

The suggestions and recommendations provided by Economic Security Planning, Inc.'s software tools and planning services do not constitute financial or investment advice. The creators of Economic Security Planning's software are not certified, registered, authorized, or any other form of financial planners. Economic Security Planning, Inc. is not an investment adviser registered with the U.S. Securities and Exchange Commission or any state securities agency, is not a registered broker-dealer and maintains no other regulatory credentials associated with the management of financial assets. Economic Security Planning, Inc. does not guarantee that the suggestions and recommendations derived from its software tools and planning services will necessarily achieve a secure economic plan. Like any software products, Economic Security Planning, Inc.'s software tools may have errors in its underlying code, and the assumptions about the future that it makes and that users input may prove false. In addition, output from the software tools and planning services may incorporate data obtained from third parties and such data (including any calculations that is based on such data) is provided on an "as is" basis. From time to time the output may contain errors that may be based upon, among other things, human data entry, aggregation and decompilation of data, processing of data through third party calculation engines and other processes that can give rise to errors. The company's financial plans and recommendations, including all of such plans and recommendations provided by its direct planning services, should be viewed as suggestive and informative educational inputs into your financial decision-making. None of our products or services recommend the purchase of specific financial products.

Maximized Lifetime Benefits

We examined **26,106** collection strategies to find the one that maximizes your lifetime benefits. Using the Maximized Filing Dates shown below, lifetime benefits increase by **\$162,200** over What-If Dates.

 **\$162,200**

Lifetime benefits increase by using
Maximized Filing Dates

All amounts are in today's dollars. Lifetime benefits are calculated as the present value of all future benefits assuming you live through your maximum age of life. Discounting is non-actuarial and is based on the real rate of return implied by your assumed nominal rate of return and inflation rate.

Maximized Filing Dates

Fran	files for retirement benefits in Jul 2032, the year Fran turns 70	Jul 2032
Dennis	files for retirement benefits in Jan 2039, the year Dennis turns 70	Jan 2039

What-If Filing Dates

- Fran files for retirement benefits in Feb 2025, the year Fran turns 63
- Dennis files for retirement benefits in Feb 2031, the year Dennis turns 62

What-If Filing Dates Summary

Name	Retirement	Spousal	Survivor	Present Value
Dennis:	Feb 2031 (62)	N/A	N/A	\$319,284
Fran:	Feb 2025 (63)	N/A	N/A	\$302,341
Total:				\$621,625

Maximized Filing Dates Summary

Name	Retirement	Spousal	Survivor	Present Value
Dennis:	Jan 2039 (70)	N/A	N/A	\$406,253
Fran:	Jul 2032 (70)	N/A	N/A	\$377,572
Total:				\$783,825

Household Annual Benefit Details

Break-Even Date: Apr 2049 (Dennis age -80, Fran age -86)

Break-even date is when the total present value of benefits from the maximized strategy equals or exceeds the corresponding amount from the what-if strategy.

How to Apply for Benefits

The most important advice is to access the Social Security website and get their most current official guidance on how to apply:

<https://www.ssa.gov/planners/retire/applying8.html>

Note that you can apply online, by phone, or in person, and that you should apply for benefits no more than four months before the date you want your benefits to start.

Our software calculates the maximized filing strategy for you based on your earnings history and your status as married, single, widowed, disabled, etc.

As you apply for those benefits, be sure to use your **entitlement month**, i.e. the month you start earning Social Security benefits, on your application. If you're following the maximized strategy, these are listed as the Maximized Filing Dates. If you're instead following the strategy you modeled, these are the filing dates you entered in the What-If Dates for Your Plan panel on the Report Set Up screen. Since Social Security pays benefits one month in arrears, you will receive your check one month after the entitlement month. For example, if our software calculates that you file for retirement benefits in 12/2023, you will receive your first retirement benefit check in 1/2024.

Be careful to start your entitlement in your desired month, i.e. neither too early nor too late. Social Security encourages you to apply 3 to 4 months before you want to start your entitlement. So in the above example, if you apply in 9/2023, be sure to establish your entitlement month as 12/2023.

Understanding Your Options and Our Calculations

Calculating and Presenting Your Maximized Results

Our software uses your marital status, birthdates, and earnings record to calculate retirement, spousal, divorced spousal, child-in-care spousal, widow(er), divorced widow(er), mother (father), and divorced mother (father) benefits. The software is fully updated to reflect the Bipartisan Budget Act of 2015 that changed multiple Social Security provisions.

Our software implicitly considers all possible combinations of filing dates and, in concert with all of the information you provide, it calculates the Social Security benefit collection strategy that yields the highest total lifetime household benefits.

If you've modeled a what-if scenario, you can see how it compares to the maximized strategy. There can of course be many reasons to choose an alternative strategy rather than following the one that simply yields the most benefits but that might also involve delaying filing. You can of course also leave the what-if scenario entries at the defaults and disregard the what-if output. You can't enter what-if scenarios that are disallowed by Social Security. If you enter a date set not allowed by Social Security, error message(s) will explain the problem(s).

The reports present highly accurate estimates of all your household benefits on a year-by-year basis for both the maximized strategy and the what-if strategy. The results for the maximized strategy show what year and month to file for each benefit so you can receive your maximized benefit amounts. The reports include columns for each adult and the children if appropriate, adult age(s), available benefits, deductions due to the earnings test, and the net total of these for each year.

We also take full account of the Earnings Test as well as the Adjustment of the Reduction Factor. The Adjustment of the Reduction Factor occurs at your full retirement age (FRA). If, due to the Earnings Test, you lost some part or all of a particular benefit prior to reaching FRA, Social Security will raise that benefit on an ongoing basis in light of the amount you lost. The Adjustment is intended to restore, on an actuarial basis, those specific benefits lost due to the Earnings Test.

For married and partnered couples, the tables showing the Household Benefit Details for both the maximized strategy and the what-if scenario are quite useful. They allow couples to easily compare combined year-by-year breakdowns under each scenario. Users can run any number of what-if scenarios. In the course of finding the strategy that maximizes the household's lifetime benefits, our program may consider anywhere from tens to hundreds of thousands of alternative strategies.

Social Security rules are incredibly complex. The changes to Social Security enacted in the Bipartisan Budget Act of 2015 have made it even more complex. Although we have spent years working on our software with meticulous care and test it to the extent possible against calculations that can be correctly made using Social Security's own limited software, our disclaimer makes clear that Maximize My Social Security is a) an educational tool, b) that we are not financial planners, c) that our software may have mistakes of which we are unaware, and d) that our software is

undergoing continual updating and revision to ensure we incorporate all relevant Social Security provisions.

The Bipartisan Budget Act of 2015

Important facts to keep in mind:

- The BBA 2015 did not eliminate the ability to file for and suspend a retirement benefit.
- As was the case before the BBA 2015, an individual filing for and suspending their retirement benefit is not the same as or a part of that person restricting their application to their spousal benefit only.
- The BBA 2015 did not eliminate spousal benefits.
- 5/1/1950 is the date a person must have been born on or before in order to have suspended their retirement benefit by the 4/29/2016 deadline to do so under the old rules.
- 1/1/1954 is the date a person must have been born on or before in order to be able to file a restricted application at or after their full retirement age (FRA).

Filing for and Suspending a Retirement Benefit

Though it removed some incentives to do so, the BBA 2015 in no way eliminated the ability to file for and suspend a retirement benefit. At or after full retirement age (FRA), an individual can suspend a retirement benefit they've filed for. They can suspend it immediately after filing for it and therefore not receive a single check or they can suspend it months or years after filing for it.

Unless a retirement benefit was filed for and suspended before the 4/29/2016 deadline to do so under the old rules, no one can receive auxiliary benefits, e.g. a spousal benefit, while the record holder's retirement benefit is suspended. Before the new law, it was possible for others to receive auxiliary benefits on the record of someone who had suspended their retirement benefit but this is now true only for those who suspended their retirement benefit under the old rules on or before the 4/29/2016 deadline.

Also due to the BBA 2015, no one who has suspended their retirement benefit can receive a benefit based on another's record, e.g. a spousal benefit, while their retirement benefit is suspended. Despite these changes, there are still good reasons to file and suspend a retirement benefit and doing so might be part of the maximized strategy or it may be an option worth exploring in the what-if section.

Filing a Restricted Application

It is important to not conflate filing for and suspending a retirement benefit with restricting an application. Restricting an application simply means filing for one benefit only when more than just that one are available. Entering that an individual will also file for and suspend their retirement benefit will not allow the software to model them filing a restricted application for their spousal benefit. To model an individual filing a restricted application for a spousal benefit, simply enter that they will file for their spousal benefit only at the desired date and that they will file for their retirement benefit at some later date.

How Does the BBA 2015 Affect Me?

If an individual was born on or before 5/1/1950 and they suspended their retirement benefit on or before the 4/29/2016 deadline to do so under the old rules, others can receive auxiliary benefits based on their record while their retirement benefit is suspended and they can receive auxiliary benefits on others' records while their retirement benefit is suspended.

Individuals born on or after 1/2/1954 can never file a restricted application for only their spousal benefit. They will instead be deemed to have also filed for both their spousal benefit and their retirement benefit when they file for either. If their retirement benefit is larger, they will receive it rather than the smaller spousal benefit. If they file for and suspend their retirement benefit, they also would not be able to receive auxiliary benefits based on another's record while their retirement benefit is suspended. Individuals who are eligible for both a widow(er)'s benefit and a retirement benefit can restrict their application to only one of these two benefits even if they were born on or after 1/2/1954.

No one can collect auxiliary benefits, e.g. spousal or child benefit, based on the record of someone whose retirement benefit was suspended after 4/29/2016 while their retirement benefit is suspended. Only those born on or before 5/1/1950 were able to suspend their benefit before this deadline.

No one who suspends their retirement benefit after 4/29/2016 can collect an excess spousal or excess widow(er)'s benefit while their retirement benefit is suspended.

Only those who suspended their retirement benefit on or before 4/29/2016 can receive a lump sum payment of previously suspended benefits. Those who suspend their retirement benefits after 4/29/2016 can no longer receive their suspended retirement benefits in a lump sum payment.

Those who are subject to deeming, but who aren't deemed to be filing for their excess spousal benefits when they file for their retirement benefit because their spouse has not yet filed for their retirement benefit, will be so deemed as of the date their spouse files for their retirement benefit.

Maximum Ages Are Not Life Expectancies

Deciding when to take Social Security is critically important. But it's crucial to remember that no one can count on dying on time, i.e. at their statistical life expectancy. The chances of two spouses or partners both doing so are even slimmer. There is often a chance of living well past 90. This tool takes 100 as its default value for the maximum age of life, but you can change this value to see what effect doing so has — and remember, we don't limit the number of reports that can be run. It is of course possible that you won't live beyond what the Social Security Administration or others predict. However, if you do, Social Security income (i.e., "longevity insurance") will be available for the duration of your life.

Social Security can effectively be longevity insurance if benefits are delayed as long as possible. Our software lets users make informed decisions about when to file because it shows them what they will get by following a certain strategy, which naturally involves giving up other benefits that might be available by following a different strategy. The best strategy depends on many variables and

there is no cookie cutter answer that applies to all households. And the best strategy is not always to delay all available benefits. It may be optimal to take one benefit earlier than another benefit.

Calculating the Present Value of Future Benefits

The software shows you the present value of the sum of all your future benefits for both the what-if scenario and the maximized strategy that will provide the highest present value of lifetime benefits. When determining the present value of future benefits, we do simple discounting for real interest; we do not apply actuarial discounting. Actuarial discounting takes into account the chances or probabilities of collecting particular benefits in particular future years. But such actuarial discounting, while appropriate for insurance companies, is not appropriate for individuals who cannot count on dying at particular ages.

If the maximum age of life is relatively low, taking benefits earlier will likely produce the highest present value. The same is true if you set a higher Nominal Rate of Return under Settings. In forming the present value of your future benefits, our tool takes into account the real rate of return, i.e. the return after inflation, you can earn on your savings. If you set a higher interest rate, the program may recommend taking some of your benefits early because you are, in effect, telling the program that you can do better getting lower benefits starting right away and investing them yourself. We strongly recommend leaving these entries at their defaults for your baseline runs.

Filing Early Due to Cash Constraints and Hypothetical Future Benefit Cuts

Of course, you may be cash constrained, also called liquidity or borrowing constrained, and need the Social Security income to live off right away. You simply may not have the luxury of waiting to collect. There's at least hypothetically always some chance that Social Security may reduce benefits in the future. The software allows you to assume and specify the time and percentage of potential future benefit cuts.

The Windfall Elimination Provision (WEP) and the Government Pension Offset (GPO)

Maximize My Social Security fully accounts for the Windfall Elimination Provision (WEP) and the Government Pension Offset (GPO). These provisions may apply to people who worked in non-covered employment (jobs at which Social Security FICA taxes weren't deducted) as well as in covered employment. The WEP can reduce benefits claimed on the worker's record such as their own retirement benefit and any auxiliary benefits. The GPO can reduce any benefits being received that are based on another individual's record such as spousal or widow(er)'s benefits based on the record of a current, divorced or late spouse. The WEP and GPO are not applied until the non-covered pension or retirement distribution is taken.

Choosing When to File — Never Married, Divorced, and Widowed

Those who are not eligible to claim a benefit based on another person's work record must determine only when to take their retirement benefit between 62 and 70. Filing before full retirement age (FRA)

will reduce the benefit while, if delayed, the benefit will increase up to age 70. Delayed retirement credits (DRCs) at a rate of 8% per year are calculated and applied monthly.

Those who are single and divorced after having been married at least 10 years can collect a spousal benefit based on their ex-spouse's work history once the ex reaches age 62. Those who apply for spousal or divorced benefit prior to their full retirement age (FRA) will be deemed by law to also be applying for early retirement benefits as well. Also note that if you apply for early retirement benefits, you will be deemed by law to also be applying for your reduced spousal benefit as well if your ex is 62 or over. Due to the Bipartisan Budget Act of 2015, for those born on or after 1/2/1954, the deeming provision no longer ends at FRA and is instead permanent.

Those born on or before 1/1/1954, and whose ex is under 62 at the time they apply for reduced retirement benefit, will be free to wait up to their FRA to apply for spousal benefits regardless of when their ex reaches 62.

Social Security reduces both retirement and spousal benefits based on separate retirement and spousal benefit reduction schedules. The total divorced spousal benefit will equal the retirement benefit plus the excess spousal benefit. If taken before FRA, these will of course be reduced. The excess spousal benefit is the difference between 50% of the ex's Primary Insurance Amount (PIA), which is equal to their full retirement age (FRA) retirement benefit amount, and the recipient's PIA. If the result is negative, the excess spousal benefit is \$0. The excess spousal benefit is applied if the recipient has filed or been deemed to have filed for their retirement benefit. If the recipient has not filed for their retirement benefit, the spousal benefit is simply equal to 50% of the ex's PIA.

Those born on or before 1/1/1954 might avoid wiping out or reducing the excess spousal benefit by not applying for either retirement or spousal benefit until their FRA and then applying only for their spousal benefit. Those in this age cohort who wait until 70 to collect their own retirement benefit may be able to receive a spousal benefit between FRA and 70.

Note that both divorced spouses can collect spousal benefits on the other's work record simultaneously. Married couples aren't able to do this — only one can collect a spousal benefit at any given time.

Those who are single and widowed can take survivor's benefits, also called widow(er)'s benefits, at any time after 60. If taken before FRA, it will be reduced. Widow(er)'s benefit do not increase after FRA so there is no reason to delay filing for it beyond that point. Note that widowed individuals who remarry after the month they turn 60 do not lose their eligibility to widow(er)'s benefits based on their late spouse's record.

Those whose late spouse was collecting reduced retirement benefits before they passed away and who have taken their survivor's benefit before their own FRA will receive a survivor's benefit equal to one of three calculated amounts: a) the late spouse's reduced benefit amount; b) 82.5% of the late spouse's Primary Insurance Amount (PIA), which is equal to their full retirement age (FRA) retirement benefit amount; or c) the late spouse's full retirement benefit reduced based on early survivor benefit reduction factor that applies to you.

If the deceased spouse didn't take retirement benefits early and died before reaching full retirement, the survivor's benefit will equal 100 percent of the deceased spouse's PIA. If the deceased spouse waited beyond FRA to file for retirement benefits, the survivor benefit will equal their PIA plus delayed retirement credits (DRCs). If the deceased spouse was past FRA when he or she passed away and had never collected their retirement benefit or had filed for it but immediately suspended its collection, the survivor's benefit will equal the deceased spouse's PIA plus the DRCs they would have earned had they filed at the date of their death.

Unlike spousal benefits, widow(er)'s benefits can be applied for early without causing the recipient to be deemed to be also applying for their retirement benefits. If your retirement benefit exceeds the survivor benefit and you have applied to collect both, you will receive only your retirement benefit. If the survivor benefit exceeds the retirement benefit, the recipient will receive their retirement benefit and an excess widow(er)'s benefit to bring the total survivor's benefit up to the appropriate amount.

Choosing When to File – Married Couples

Those who are married can potentially collect a spousal benefit based on your spouse's record, though both cannot do so simultaneously. Those who apply for retirement benefit before their FRA will be deemed to have applied for their spousal benefits as well if their spouse has filed for their own retirement benefit. Those born on or after 1/2/1954, will be subject to the deeming provision even after their full retirement age (FRA). Those who file for their spousal benefit early will be deemed to have also filed for their retirement benefits as well and both benefits will be subject to separate reductions. Those born on or before 1/1/1954 and who have reached their FRA can restrict their application to their spousal benefit only and delay filing for their retirement benefit until as late as 70. To do so, their spouse must be collecting their retirement benefit.

For those who filed for their retirement benefit at the same time as or before filing for their spousal benefit, the total spousal benefit will equal the sum of their own retirement benefit plus their excess spousal benefit. The excess spousal benefit is the difference between 50% of the spouse's Primary Insurance Amount (PIA), which is equal to their full retirement age (FRA) retirement benefit amount, and the recipient's PIA.

For those who don't file for their retirement benefit at the same time as or before filing for their spousal benefit, the spousal benefit is simply equal to 50% of the spouse's PIA.

Comparing Our Benefit Calculations with Social Security's Benefit Statement

There is a quick retirement benefit estimator provided by Social Security. But this calculator does not consider the full range of potentially available benefits. It also bases its estimates assuming zero future economy-wide real wage growth and zero future inflation. Neither of these assumptions is realistic. Both differ from the assumptions made by the Social Security Trustees in their Annual Report. Social Security underestimates benefits to be conservative in telling people what they will be receiving. In contrast, our software uses the Social Security Trustees' assumptions about future real wage growth and future inflation.

Social Security provides another, more detailed calculator, called AnyPIA, which lets you specify your own estimate of your future covered earnings as well as tell the tool to assume positive future real wage growth and inflation in forming its estimates. But like its quick retirement benefit calculator, AnyPIA does not give you the ability to optimize over your own retirement benefit and benefits you can receive based on your current or former spouse's work history.
